# BIG DATA IN 7<sup>TH</sup> EMB FORUM MARINE SCIENCE

The European Marine Board Biennial Open Forum acts as a platform to bring together a wide range of marine science stakeholders to discuss and share knowledge, identify common priorities, develop common positions and collaborate. The 7<sup>th</sup> EMB Forum will foster discussion and collaboration to advance the role of big data, digitalization and artificial intelligence in marine science to support the European Green Deal, the post-2020 EU Biodiversity Strategy, and the development of a Digital Twin Ocean.

Big data is rapidly transforming our society and is leading to a paradigm shift in the way we face major challenges including climate change and the sustainable management of marine resource use. With the expansion of the scale and scope of ocean observing systems and other data sources, there is an increasing flood of highly complex ocean data being generated, often in near real-time. Data need to be integrated and readily available to support decision-making, which can be assisted by artificial intelligence. Find out more in the EMB Future Science Brief No. 6 'Big Data in Marine Science'.
